

Learning in the Age of Experience

To prepare our young generations for the 21st century job market and to access the best and largest employment opportunities, the learning methodology and scope is constantly being improved. The 21st century professionals of now and tomorrow have the privilege to leverage on advanced technology to encourage creation of new ideas and product design innovations without limits.

Academia has the same challenges as industry to innovate cleaner and safer products by taking into account the environment. This seminar aims to provide the academic world with the view of learning opportunities for all ages in the latest 3D and PLM technology.
